

**SNR rail solutions:
The future on rails**

SNR - Industry

**Since its incorporation,
SNR has been rising to the
challenges set by the rail industry**

Client references: SNCF - ALSTOM - RATP - BOMBARDIER - TI - ARBEL - ABRF
ATELIER DE JOIGNY - LORMAFER - NOVATRANS - ERMEWA SATI - CTC - SDH - CFD

**On board when the TGV® began,
still there at 385km/hr**

SNR, at the very heart of big European rail projects for more than 40 years. Its cutting edge technological know-how has made it the indispensable partner of the main international players in OEM and AFT. After its contribution to setting the world speed record at 515.3 km/hr on all TGV® components, SNR is now the only manufacturer approved at 385 km/hr on bench. Our position as a technological leader may be explained by the high level expertise of our R&D engineers, our comprehensive array of laboratory and test centre equipment and our dedication to State-of-the-Art technical solutions: materials, geometries, surface treatments, etc.

The SNR Group: from the railroad track to the highway to the stars

Although it was automotive bearings that forged SNR's reputation through the decades, these products are now proving their worth in other extremely demanding mechanical environments in the industrial and aerospace markets.

- **Automotive:** Today, 8 out of 10 of the best selling vehicles in Europe are fitted with SNR instrumented bearings.

- **Aerospace:** SNR, the partner/developer of major aeronautic and space programs. Know-how confirmed through numerous joint projects with the main players in these markets : the A380, the biggest commercial airplane in the world and the Ariane 5 space launcher.

- **Industry:** The diversity and technicality of SNR bearings is acknowledged in all the main sectors. SNR bearings provide solutions specific to industrial requirements: textile, agricultural, robotics, mining, steelworks, paper mills, cement works, agri-food, etc.

Our services: watching over the service life of each product, from design through to maintenance

The key to efficient/high level services is dependability and local support

SNR is a human sized company, we have learned to stay close to our customers to listen more intently, to bend and shape ourselves and respond to their needs. Through our in-depth background in bearings, we can offer technical expertise absolutely vital to optimise and ensure the reliability of the solutions we offer.

Maintenance guided by reliable analysis tools

To ensure the excellence and responsiveness of its maintenance services, SNR places its skills and know-how at the service of its clients to optimise solution integration.

- **Fitting advice and assistance on site during the start-up phase** to guarantee optimum implementation of the solutions offered.
- **Assembly of series solutions on site** by dedicated teams able to intervene throughout Europe.
- **Bearing, maintenance and visual inspection training** to complete assembly documents specific to each application.
- **Axle blocks bearing maintenance and reconditioning** to optimise investment while guaranteeing product safety and reliability.

Traveling together towards the solution

Manufacturer, but first and foremost a partner/developer

SNR's expertise as a developer is a major asset contributing to our success with high-tech partnerships. SNR is certified ISO 9001: 2000, AQF2, ISO TS 16949 and ISO 14000.

This wide array of certifications allows us to meet all the requirements of the market.

Cutting edge tools for simulations

The efficiency of each solution is optimised by a comprehensive range of simulation tools:

- **Sharc:** calculates service life at the heart of the application,
- **Erode:** bearing calculations/design in their deformable environment,
- **Redjeu:** analysis of bearing assembly,
- **Ideas Master Series and Abaqus Standard:** CAD and non-linear and linear Finite Element Method optimizers.

SNR laboratory and test centre: an unrivalled validation tool.

Our experts have access to powerful means to test bearings assembled and in operation, means to analyze grease condition and detect material fatigue (spectroscopy, scanning electron microscope, etc.). These tests are used to verify material quality, design and manufacturing methods. They are carried out in accordance with the main standards (ISO 9000, EAQF 94, QS 9000, ISO TS 16949, ISO 14000, MCV, IMDS, COFRAC accreditations, etc.).

Your applications determine our solutions

Reach beyond the circle
of the bearing for global solutions

“ Because we develop analytical knowledge and understanding of our clients' requirements and dedicate 5.5 % of our sales turnover to research and development, we can now offer innovative solutions that are tailored to the requirements of the rail industry. ”

Rail: Millions of Km in total safety

To guarantee the durability and reliability of solutions in extreme conditions, SNR has achieved irreproachable mastery of surface treatment techniques through implementation of efficient, innovative processes:

- phosphate and copper plating: anti-fretting corrosion,
- deposition or ceramic rolling bodies: electrical isolation,
- nitriding: surface hardening.

LubSolid: lubrication under extreme conditions

A major, exclusive SNR invention, LubSolid may be used for life lubrication of any type of bearing, thus extending their service life and limiting maintenance costs. Therefore, the advantages for the rail industry include: the reduction of Dummy Brinell Effect problems, maintenance free operation and the assurance of lubrication in different environments. SNR offers 5 types of LubSolid, each adapted to a different application area.

ASB®: a new intelligent bearing standard

SNR, the pioneer of instrumented bearings, invented ASB® (Active Sensor Bearing), a patented mechatronic process incorporating a sensor precisely measuring wheel speed allowing it to modify its behaviour accordingly. The result of 20 years of research, ASB® has now become a standard adopted the world over by the biggest manufacturers and automotive equipment companies.
